Case Study
Wireless Switch
Firmware Porting

One of the renowned network device providers was looking for a suitable service provider with experience with real time development. They wanted to port the legacy firmware of their Wireless switch to their new line of product that they were planning to introduce in the market soon.

ReliSource development team started working with the company with aggressive deadline and ported the wireless access point software into the new device. The firmware was developed in VxWorks platform. Other technologies involved were Fedora OS, Make, Scons and Python etc.
