Case Study

Temperature Monitoring in Wireless Network

Background

ReliSource worked with a Leading OEM and Cold Chain Visibility Solutions provider to collect and monitor temperature in a wireless network.

Overview

Collect and manage time, temperature & location data from temperature sensors. The team worked on the following:

- Firmware for temperature data logger
- Tool to analyze RF protocol
- Toll to monitor data communication
- iPhone App to download data from sensors & forward to central server
- Software to manage activity of hardware components

Our Value Adds for the Client

100% improvement in Time to Market

Significant reduction in customer reported bugs

100% increase in capacity via inexpensive solution

Huge savings in maintenance cost
